Abstract (en)
[origin: US2009075790A1] An apparatus for connecting an exercise device to a structure is described. The apparatus includes two different attachment devices, such as a door anchor and a ring. The door anchor is supportable by a closed door. The ring loops back on the apparatus to form a loop that may be wrapped about a support structure. Alternatively, the ring may be supported directly by the structure, as through an eye bolt attached to a wall.
