Abstract (en)

[origin: WO2009033841A1] A hand-held power tool (10) is proposed, comprising a drive device (12) for driving a tool, which device is arranged in a housing (14) of the power tool and in which power tool the handle (16), which is movably connected to the housing (14) of the power tool, is vibration-damped by a movable compensating means (30). For this purpose, the movable compensating means (30) is operatively connected to the handle (16) and/or the housing (14) of the power tool by a deflecting system (20).
