Abstract (en)
[origin: WO2008138283A1] In a shovel apparatus (100) for a snow shovel, having a shovel element with a front edge (110) for receiving snow, a surface (101) for storing snow and two side panels (112, 112') and a rear panel (113) for holding snow which is stored on the surface (101), a capability to be combined with conventional handle devices can be achieved by a notch (130) being formed in a central region of the shovel element, which notch (130) is of closed configuration with regard to the surface (101) of the shovel element and is of open configuration with regard to a lower surface (102) of the shovel element, and which notch (130) contains a bearing for receiving a device (140) for receiving a handle.
