Abstract (en)

[origin: WO2009047458A2] The invention relates to a device for rotating and holding the winding tube (110) of a mobile screen, that comprises an actuator (120) provided with an output shaft (121) and inserted (F1) into the winding shaft by a first end (111) of said tube (110) and capable of rotating the winding tube (110) via the output shaft (121). The device also includes an end piece (150) defining a holder for the tube (110) equipped with the actuator (120). At least one overlapping portion (153) of the end piece (150) extends axially from the second end (112) of the shaft towards the first end (111) up to at least a portion of the output shaft (121).
