Abstract (en)
[origin: FR2921185A1] The apparatus has simulating units for simulating a movable lower jaw and a fixed upper jaw, where the units are formed by two disks (21, 22) parallel and aligned on a common axis (A-A'). Driving units constituted of a driving device (16), an electric motor (17), a rotating ball (18) and a notched pulley (19), drive the disk (21) in rotation with respect to the other disk around the common axis, and translation units constituted of a splined shaft (12), a jack (13) and an electrical motor (14), parallelly translate the disks to the common axis.
