Abstract (en)

[origin: EP2037537A1] The module (12) has a connection terminal connecting a power line of a photovoltaic surface element. Housing (20) surrounds electric components (30a, 30b), and formed in plate shape such that an extension of the housing in a thickness direction is multiple times smaller than an extension of the housing in a direction transversely to the housing. An electric line is provided between the terminal and a connection element (34) e.g. bridge circuit, for electrically conductive connection of the module to a current accumulating module. An independent claim is also included for a current accumulating module comprising an accumulating terminal.
