Abstract (en)

[origin: EP2191943A2] The device has a motor-driven winding unit (24) and a coil for winding a cutting unit (18) for severing an adhesive bulge (34). The winding unit is detachably held by a coupling (15) on a suction plate (19) fixed at the disk inner surface. The winding unit is held on the suction plate in a rotating manner. An independent claim is included for a method for severing an adhesive bulge of a disk.
