Abstract (en)
[origin: EP2191977A2] The device (20.1) has a printing element (28) moved in a vertical direction and provided with a horizontal printing surface. The printing element comprises a needle that projects from the printing surface. The needle is arranged at a right-angle on the printing surface that comprises a recess for retaining the needle. The needle is connected with the printing element at a lower end, and an upper end of the needle comprises a tip that is raised opposite to the printing surface. An independent claim is also included for a method for applying cover on a book block.
