Abstract (en)  
Modular wall device comprising a plurality of vertical uprights (2) and horizontal crossbars (3) mutually fixed to form a reticular structure (4), panels (5,6,7,8), said panels having at their opposing sides longitudinal rib means (15) which protrude of a predetermined length and hooking means (10) for supporting the panels (5,6,7,8). The hooking means (10) comprise a connection means (16) for connecting to the uprights (2) or crossbars (3), a spacer means (17) between said connection means (16) and first (18) and second flap means (19), the flap means (18,19) being mutually parallel and protruding perpendicularly from the spacer means (17), one of them of a length approximately equal to the protruding predetermined length of the panels rib means (15), the other protruding in the opposite direction with respect to the first means (18) and of half the length of the first means (18).
