Abstract (en)
[origin: EP2192255A1] The device (60) has an anchoring element including a U-shaped profiled piece with flexible wings (68, 70) arranged parallel to each other. The piece includes a flange forming support carriers (82, 84) that are arranged respectively on opposed faces of the wings. The wings are moved between an assembled position in which the anchoring element is engaged between ribs (48, 50) of the wings and a spaced position in which the carriers are respectively engaged on retaining edges (52, 54) of the ribs. An independent claim is also included for a post for a metallic joinery work and including a rigid wing presenting a free edge.
