Abstract (en)
Hinge for vehicle doors, comprising two articulated arms, each one of them comprising a blade extending into a neck which ends in a bushing, the blades of said hinge having each one of them at least one hole for the passage of a fixing screw, and the bushings of the two arms being aligned and housing a hinge pin. In one of the arms, at least, the hole of the blade is displaced, with respect to the medium transverse plane of the bushing, in an opposite direction to the other arm, thus the distance between the axes of the blade holes of the two arms being greater than the distance between the medium transverse planes of the bushings of said arms.
