Abstract (en)

[origin: EP2192308A2] The method involves supplying a hydraulic actuator (11) with an amount of pressure fluid by a variable displacement pump (13) that is operated by a speed-controlled motor (14) e.g. electro motor. A signal, which represents pressure of a pressure fluid, is fed back to a pressure controller (10) for controlling the variable displacement pump. The motor is operated based on a speed signal, and characteristics of a control amplifier of a pressure regulator are varied according to the speed signal. Amplification of the control amplifier is adjusted based on the speed signal. An independent claim is also included for a control device for controlling a pressure fluid supply for a hydraulic actuator of a machine.
