Abstract (en)
[origin: FR2915974A1] The container (1) has an internal compartment (10) formed of flat sheath. The sheath has a horn shaped end (13) folded towards a closed end (12). The compartment is placed in an external compartment (20) formed of another sheath. The latter sheath is equipped with access doors (25, 27) e.g. disposable access doors, near the closed end and with respect to a portion of the folded end, respectively. The door (25) crosses walls of the compartments. The door (27) only crosses the wall of the external compartment. An independent claim is also included for a method for fabricating a container.
