Abstract (en)  
[origin: WO2009043489A1] The invention relates to a dispenser or similar discharging container, particularly for lump-form food (5), having a housing (1), the bottom side (2) of which determines an installation plane, and having a gate (6) disposed in the housing (1) in a movable fashion that, when activated, is moved with a circumferential region (17) past an edge (8) of the housing (1), characterized in that said dispenser comprises an appendage (9) connected to the gate (6) via at least one target breaking section (10); upon the activation of said gate, said appendage impacts the edge (8). The dispenser further comprises at least two feet (11) extending downward through the installation plane upon activation of the gate (6).
