Abstract (en)  
[origin: GB2445815A] The invention relates to a brick guard (1 figure 1) for use with scaffolding to act as a safety screen (2 figure 1) to protect against masonry falling from a scaffolding lift. The screen (2 figure 1) comprises a semi-rigid mesh of plastic material having an integral continuous runner portion 5 along a top edge, and is suspended in use by at least two separately moulded hook portions 3. Each hook portion 3 comprises a support portion and at least one retaining member 10, 11, 12, 13. The support portion comprises at least one hook member 4 for passing around at least the upper half of the top rail of the scaffolding lift to support the brick guard from the top rail by use of the retaining members 10, 11, 12, 13. The retaining members, alone or in combination with one or more other such retaining members, releasably clip the support portion to the top edge runner portion 5 of the mesh screen.
