Abstract (en)

[origin: DE102008018500A1] The motor vehicle lock has a locking element of a bolt, a catch (1), and a lock mechanism (2). The lock mechanism is moved into different functional states, for e.g. unlocked, locked, anti-theft locked, or child-safety locked and has a functional element (3) that is adjusted into corresponding functional positions. The functional element is configured as a spring-elastic, bendable wire or strip. The functional element is bending into different functional positions in a spring-elastic manner as a bending functional element.
