Abstract (en)
The dual use knife comprises a body equipped with a first opening, an edge (3) of a blade forming a trimming tool part for which the part of the accessible blade edge is framed by protecting walls (5, 6) and fitted with a second opening (7), an access point (8) of the blade at the end of the knife, and a removable rear cover. The body of the knife comprises a housing for sliding the blade between a retracted safe position for which the tip of the blade remains inside the body and a forward position for which the point of the blade protrudes from the body by the second opening. The dual use knife comprises a body equipped with a first opening, an edge (3) of a blade forming a trimming tool part for which the part of the accessible blade edge is framed by protecting walls (5, 6) and fitted with a second opening (7), an access point (8) of the blade at the end of the knife, and a removable rear cover. The body of the knife comprises a housing for sliding the blade between a retracted safe position for which the tip of the blade remains inside the body and a forward position for which the point of the blade protrudes from the body by the second opening. A blade holder is equipped with a button (10) for pushing the blade from the retracted safety position towards the forwarded position. A return unit of the blade is present in the direction of the retracted position. A movable abutment body is sliding in a rear part of the knife. The abutment movable body is adapted to define many abutment positions more or less reversed for the blade. Back abutment position is made using a notching device between the abutment body and a knife groove in which the abutment body slides. The rear portion is constituted by removable rear cover. The blade comprises a serrated profile.

Abstract (fr)
- L'objet de l'invention est un couteau à double usage qui comporte un corps (1) muni d'une première ouverture (2), d'accès au fil (3) d'une lame (4) et formant une partie d'outil d'ébarbage pour laquelle la partie de fil de la lame accessible est encadrée par des parois de garde (5, 6), et muni d'une seconde ouverture (7), d'accès à la pointe (8) de la lame en bout du couteau.
