Abstract (en)

[origin: EP2193928A2] The method involves grooving and folding a fold (11). The fold is connected with a block, and is turned after folding the double sides. The fold has a central backplate (12), two covers (13) and two flaps. Two covers surround the sides of backplate opposite to each other, and two flaps (14) are attached outwardly at each cover. An independent claim also is included for a device for manufacturing the printed image elements.
