Abstract (en)

[origin: EP2194281A2] The device (10a) has a base container (11a) with a chain connection unit (34) in fluid connection with a compressed air-connection unit (18) at a chain side (14) of container. A chain connection unit of an auxiliary container (15a) is arranged on a chain side (17) of the auxiliary container, where the base container chain connection unit is in fluid connection with auxiliary container-chain connection unit. The auxiliary container has a service unit and/or compressed air-measuring device for generating measured data and/or another compressed air-connection unit (19) for compressed air lines.
