Abstract (en)
LED lamp, more in particular LED strip-light (1), comprising a tubular housing (2) which on the inside is provided with a plate, partly or completely extending in the longitudinal direction of the housing, the plate being provided with LEDS (3), and the housing further at the side of the LEDS being formed by a window (4) extending, partly or completely, in the longitudinal direction of the housing (2) for the transmission of the light of the LEDS (3) outwards of the housing, with at least at one end of the housing a pin holder (6) which is provided with openings for the lead-through of a pair of connecting pins (8), which connecting pins each with one outer end protrude outside and by means of which outer ends the lamp can be fastened in an armature and can be connected to a power supply, while the connecting pins with their other outer end inside the housing are connected to a wiring for the power supply of the LEDS, so that the lamp is provided with means by which the housing, when the lamp is placed in the armature, is rotatable around its longitudinal axis, in such a way that, by rotating, the window can be directed to a place or object that is to be illuminated.
