Abstract (en)
[origin: EP2194539A2] The cable has wires (1-4, 1a-4a) i.e. copper wires, stranded together in pairs to form stranded elements with equal or different lay lengths. The stranded elements are arranged adjacent to each other such that equal wire arrangements lie in regular distances at selective locations. The stranded elements are arranged in a cable sheath (30) such that identical wire configurations are obtained at the locations. An identical color is assigned to the wires by separation of the wires at points. Identical connection elements are attached to cable ends obtained by the separation. An independent claim is also included for a method for automatically assembling ends of a data cable.
