Abstract (en)

[origin: WO2009034234A1] This invention relates to an arrangement for adjusting the height of a carrier (1), which carrier (1) includes at least a carrying section (2) intended for carrying a child, upper support elements (5, 6) attached to the carrying section and placed over the wearer's shoulders, and lower support elements (7-9) to be placed around the wearer's body. The carrying section (2) is equipped at least with essentially webbing like adjustment elements (10, 11, 14), with which the multisteped or stepless height adjustment is designed to be carried out.
