Abstract (en)
[origin: WO2009039874A1] A refrigerating sales furniture comprises a furniture body (4) having a goods presentation and refrigeration space (6), a heat-rejection heat exchanger (18) of a vapor compression cycle, said heat-rejection heat exchanger (18) being positioned within the furniture body (4) and cooling, in operation, refrigerant flowing therethrough against ambient air, and at least one air inlet (16) leading an ambient air flow to the surface of the heat-rejection heat exchanger (18). Said air inlet (16) is arranged at a greater height than the height of the middle portion of the heat-rejection heat exchanger (18), thereby limiting, in operation, the amount of ambient air comprising soiling particles flowing through the heat-rejection heat exchanger (18).
