Abstract (en)

[origin: CA2700822A1] The application provides a protective sleeve (36) for a medical device (10) having a distal end positionable in a blood vessel, the protective sleeve including a body (38) defining a passage (44) therethrough and a vent (46) in fluid communication with the passage, where at least a portion of the distal end of the medical device is positionable within the passage. An introducer device (56) may be included having a sheath (58), where the sheath defines a first passage for receiving a portion of the catheter. In addition, the sleeve may be releasably engageable with the introducer device for subsequent insertion of the medical device into the introducer device.
