Abstract (en)
[origin: WO2009033606A1] The invention relates to an arrangement of a snow-ski board (1) with a binding with toe (2) and back jaws (3) and a binding plate (4), wherein the binding plate has a central vertical bearing (6) and at least one, preferably two, horizontal bearings. A binding mounting point is provided on the ski and a force application point (17), which is dependent on the binding, is provided on the binding plate. The arrangement is characterized in that the force application point can be set and fixed on the binding mounting point and that the force application point is maintained on the binding mounting point independently of the bending stress on the snow-ski board.
