Abstract (en)

[origin: WO2009086950A1] The invention relates to a device for laying printed products (07) onto a conveyor belt (12). Said device comprises a bladed wheel (01) that supports a plurality of blades (02) which are distributed in the circumferential direction and each of which forms an external face and an internal face of a compartment (03) accommodating the printed products (07), and at least one decelerating element (08). The decelerating element (08) has a deceleration surface which is swept by printed products (07) that are inserted into the compartments (03). The decelerating element (08) is disposed so as to enter the bladed wheel (01) at the trailing end of the blades (02).
