Abstract (en)  
[origin: WO2009047069A2] The invention relates to a refrigerator device (1), comprising a thermally insulated housing (2), the interior (8) of which is accessible via an opening and closing door (10), at least one flow duct (A, B, C, D) for the introduction of air into the interior (8), a fan (13) for generating an air flow along the flow duct (A, B, C, D), and an air filter (28), arranged in the flow duct (A, B, C, D). According to the invention, an air filter (28) for a refrigeration device (1) can be produced with an adequate filter effect with low airflow hindrance into the refrigeration device (1), wherein the air filter (28) in the flow duct (A, B, C, D) only extends over a part of the flow width (23) thereof. The invention further relates to an air filter (28) designed as a filter cartridge (28a).
