Abstract (en)
[origin: WO2009026922A2] The invention provides a thermostat for controlling a room temperature by operating a valve of a radiator. To prevent unintended adjustment of the temperature, the thermostat comprises a locking structure which may prevent changing of a temperature set-value. The thermostat comprises a handle for setting the set-value by rotation of the handle relative to the base, and to improve the thermostat and to provide a more simple operation of the thermostat, the handle is also moveable relative to the base for locking and unlocking the locking structure.
