Abstract (en)
[origin: EP2196321A2] The element has a polymeric spacer layer, a layer formed of metallic clusters, and a transparent layer with high refractive index. The refractive index of the transparent layer is higher than refractive index of the polymeric spacer layer. The transparent layer includes metal oxide or metal sulfide, which is applied in a vacuum evaporation process. A single or double-sided adhesive coating is provided in the element, or the element is laminated against a supporting film. The polymeric spacer layer includes fluorescent dye.
