Abstract (en)

[origin: EP2196750A2] The collector (1) has a base part and a covering part. Two sheet metal units are manufactured by forming a base part and the covering part having continuous soldering fold and a longitudinal partition or transverse partition walls (2b,3b). The soldering fold is arranged in a soldering plane and soldering surfaces are arranged between the partition walls in another plane different from the former plane. An independent claim is also included for a heat transducer, particularly evaporator for an air conditioning system of a motor vehicle.
