Abstract (en)
[origin: EP2030910A1] The blister belt (10) has a rollable product carrier separable into individual blister sections. The product carrier exhibits individual cavities (14) provided one after another in a conveying direction for accommodating individualized medical, pharmaceutical and/or food supplement product (11) e.g. tablet, where the cavities define a partition (T) of the blister belt. A foil-like covering (15) closes the cavities in such a manner that each product is arranged within the respective cavity in a closed manner, where each cavity exhibits a receiving space (23) that is molded in two-stage.
