Abstract (en)
[origin: WO2009033195A1] The invention relates to a mobile water dam, particularly for the protection against high water, comprising a planar and flexible banking wall (1), the one longitudinal side of which is non-displaceably connected to the dam bottom (2) by fastening means, and the other longitudinal side of which is held at a certain height at a distance from the dam bottom (2) by means of a floating body (4) connected to the banking wall (1), wherein the floating body (4) is movably connected to the dam bottom (2) by traction means (8) extending on the banking wall side facing the water. In order to create advantageous assembly conditions, according to the invention the traction means (8) and the banking wall part extending on the dam bottom (2) are non-displaceably connected to the dam bottom (2) by common fastening means.
