Abstract (en)

[origin: WO2009019363A2] The invention relates to a device for reducing noise pollution that comprises an acoustic panel (1) and at least one member (3) for elastically holding said panel (1). The holding member (3) includes: first and second mounting means (8) for installing the same between a holder (2) and the panel (1), a spring portion (6) provided between the first and second mounting means, a tab (7) having one end connected to the second mounting means (5) and bearing, at a distance from said end, the first mounting means (8) so that a movement (D) of the panel (1) perpendicularly to the main faces (14A, 14B) thereof is permitted by an elastic deformation of the spring portion (6) in the tilting direction (B) of the tab (7) relative to the second mounting means (5).
