Abstract (en)

[origin: WO2009030618A1] The invention relates to a hinge housing for a door of a domestic appliance, at least part of the door hinge being received in said hinge housing in such a manner that the door hinge can be displaced between two final positions depending on a degree of opening of the door of the domestic appliance. A seat for a contact damper is configured and arranged in the hinge housing in such a manner that the door hinge contacts a contact damper inserted in the seat before it reaches at least one of the final positions.
