Abstract (en)
[origin: EP2447636A1] A refrigeration module (1) capable of being removably fitted into a refrigeratable compartment, comprising at least a first housing (100) and a second housing (200) directly and firmly associated with each other, the first housing (100) interfacing the refrigeration module (1) with the inside of the refrigeratable compartment, the second housing (200) interfacing the refrigeration module (1) with the outside of the refrigeratable compartment, the first housing (100) having an evaporator (104), the second housing (200) having a condenser (206) and a compressor (204) connected with each other, the compressor (204) being associated with the evaporator (104) through at least one suction line (12), the refrigeration module (1) being characterized in that the first housing (100) is capable to fit into the refrigeratable compartment through a fitting portion (111) whose cross section is smaller than the largest cross section of the second housing (200), the first housing (100) and the second housing (200) being mechanically connected with each other.
