Abstract (en)
[origin: WO2009046936A2] The present invention relates to a refrigerator and/or freezer with at least one body and at least one door or flap which can be pivoted relative to the body, wherein the door or flap has a first region which is bounded by a peripheral seal when the door or flap is closed, and wherein the door or flap has at least one second region lying outside said first region, wherein the second region contains at least one receiving element in which one or more functional elements of the refrigerator and/or freezer are arranged.
