Abstract (en)

[origin: EP2198725A1] The swash plate has troughs for receiving bar-shaped articles which are arranged to co-rotate in synchronized manner. The swash plate is adjusted to a side surface of a conveyor drum for transverse-axial conveying of the bar-shaped articles of the tobacco processing industry. A through hole extends on a circumference circle in the circumferential direction and is formed not to partly overlap with the troughs. An independent claim is also included for a tobacco processing machine with a tobacco stock-filter plug-tobacco stock group.
