Abstract (en)

[origin: EP2198730A1] Sports boot (10) comprising a lower part (12), to contain a user's foot, and an upper part (13) pivoted on the lower part (12) to contain the ankle. The lower part (12) and the upper part (13) comprise a central opening (11) defined by respective edges (11a, 11b). A closing device (15) is disposed astride the central opening (11) and is attached on the two edges (11a, 11b) to determine the closing of the central opening (11). The boot (10) comprises an opening device (18, 118) provided with a first element (16) attached to a first edge (11a) and comprising adjustable positioners (27, 127, 30, 130), to define one or more determinate reciprocal positions of the first element (16) and the first edge (11a), in which the first element (16) is maintained toward the central opening (11). The opening device (18, 118) is provided with a second element (17) attached to a second edge (11b) and comprising constraint means (26), in which the first element (16) is temporarily constrained, in the active condition of the positioners (27, 127, 30, 130).
