Abstract (en)

[origin: EP2198736A2] The apparatus has chuck jaws (2, 3) elongated and articulated with each other and moved between an open position and a closed position (F). Electrical heating units (6, 7) are connected to one of work surfaces that are defined by the jaws. A selection unit (M) with micro-switches manually selects values of adjustment parameters. An electronic control unit (10) controls functioning of the heating units based on the selected values of the adjustment parameters, where the adjustment parameters are nature of hair, ethnic origin of the user, and type of hair.
