Abstract (en)

[origin: EP2198973A1] The device has a sleeve (7) with a distribution pump integrating unit, and an outer frame (8) axially sliding around a peripheral bearing (13) with axial grooves (14). An internal wall of the frame has axial ribs (16) that are arranged in the axial grooves while mounting the frame around the peripheral bearing, where the geometry of the ribs is complementary to geometry of the grooves. The peripheral bearing is extended around sleeve fixation units. An independent claim is also included for a dispensing flask comprising a body.
