Abstract (en)
[origin: EP2199028A2] The electric hand tool has a housing and a hammer tube (1), where the hammer tube is pivoted in the housing by a bearing element. The bearing element is fixed in the housing by rotation in form-fit manner. The bearing element has an outer diameter, which is greater than every outer diameter of components placed on the hammer tube between the bearing element and a hammer tube front side. An independent claim is also included for a method for introducing a hammer tube into the housing of an electric hand tool, particularly drilling or slide hammer.
