Abstract (en)

[origin: EP2199072A2] The drive assembly comprises multiple drive machine connections (2), gears (3) and drive units (4), where the drive components are provided based on technical features. The drive components are designed such that a drive device is configured by every combination of the drive components. An electric drive motor or a flywheel device is provided as a drive unit in an optional manner. An independent claim is also included for a method for manufacturing a drive device.
