Abstract (en)

[origin: EP2199083A1] The control has a machine control (2) providing a target value signal. A section control (4) is controlled by the value signal and controls a printing machine component (6) e.g. printing drum. Another section control (8) is controlled by the former section control and controls another printing machine component (10). A sensor (12) for detecting a vertical shaft signal is coupled with the machine control or the latter section control. The section controls produces a virtual vertical shaft signal. The section controls are connected with the respective components directly or via data buses. An independent claim is also included for a method for controlling a printing machine.
