Abstract (en)
A hose guiding member (8) is provided. The hose guiding member (8) has a rotation axis (16) and a groove adapted to receive a hose. More particularly, the hose guiding member (8) comprises a first and a second outer portion having a first radius, and an inner portion having a second radius, wherein the inner portion is placed between the first and second outer portions, such that the first and second outer portions and said inner portion form the groove. A difference between the first radius and the second radius is larger than a diameter of the hose. A fuel dispensing unit (1) comprises a hose guiding member (8) is also provided, as well as a method for handling a hose.
