Abstract (en)  
[origin: EP2199443A1] The unit (10) has a supply device (43) for supplying elements of a harness, and a receiving device (42) for receiving elements e.g. lamellas, of the harness with a threaded warp thread. A threading module (11) separates the elements of the harness from the supply device to grip the warp thread for threading the warp thread into the separated elements. The threading module places the elements with the warp thread on the receiving device, where the unit is spatially moved for threading individual warp threads. Independent claims are also included for the following: (1) a threading machine for threading of warp threads (2) a method for threading warp threads of a warp into harness elements.
