Abstract (en)

[origin: EP2199484A2] The shading device i.e. blind (1), has a central control unit connected with a motor e.g. valance shaft motor, and an illuminating units (11) using conductor lines. The control unit is connected with a current-voltage supply. The control unit controls the motor and the illuminating units. The motor and the illuminating units are supplied with power using the control unit. The control unit has a wireless receiver for receiving and for processing signals of a wireless remote control. The motor and the illuminating units are switched and actuated by the remote control.
