Abstract (en)
[origin: EP2199501A1] The building has a building opening and closing element (1) pivoted around a rotational axis in the building opening. The closing element closes the building and allows a passage of a person through the building opening into an open space. An actuation element (3) is blocked in the base position by a blocking device. The blocking device has a pendulum door opener that is arranged in a wing frame profile.
