Abstract (en)

[origin: EP2199507A2] The window has a leaf (2) that is pivotable against a frame (1). A connecting rod fitting selectively locks or unlocks the leaf within the frame. A disk element (10) has a leaf frame (9) enclosing the disk element, and a fitting groove (13) for accommodating a length-adjustable connecting rod (5) of the rod fitting. The fitting groove is opened at a side of the disk element and comprises a base on a side that is turned towards the frame, where the base is closed at a projecting part. The fitting groove has a guiding element for guiding the connecting rod.
