Abstract (en)  
[origin: EP2199522A2] The profile (10) has a lip section (40) connected with a base body (20) with free ends (42) and attached at a reinforcing pad (9). Regularly arranged notches (50) are processed from the free ends perpendicular to longitudinal extension of a string, and partially penetrate the lip section based on thickness of the lip section, so that a material web (48) with defined thickness is formed. The lip section is formed with a heat reflecting coating (70) with thickness of 3 to 5 micrometers, and is made of foamed rubber, where the profile is made of elastic and/or elastomeric material.
