Abstract (en)

A conveyance unit (121) conveys an RFID holding medium (102) along a guide path (113) for guiding RFID holding media and an RFID reader-writer (111) conducts radio communication to an RFID chip placed in a predetermined communication position (QP) in the guide path. A control unit (301) stops an RFID holding medium in the communication position and controls the RFID reader-writer to try first communication to the RFID chip (201). If first communication fails, the control unit conveys the RFID holding medium to the downstream side or upstream side of the guide path and controls the RFID reader-writer again to try communication to the RFID chip.
